

PILOT OFFER

Three working modules of your operation, *live in 30 days.*

For US 10-50 truck fleet operators, small professional services firms, and family-owned businesses still running on spreadsheets, WhatsApp, whiteboards, and paper. You are not looking for a plan. You are looking for someone who will ship.

INVESTMENT
\$5,000
Flat. 50% kickoff · 50% on delivery.

WHO THIS IS FOR

Operators, not buyers of transformation

You have probably tried the big platforms. Samsara, Motive, one of the SaaS tools that promised everything and delivered a dashboard nobody in ops uses. Or you have tried an offshore freelancer who showed up, took the advance, and went quiet.

Your team knows the work. What is missing is software that actually holds it together.

WHAT YOU ACTUALLY GET

Three modules, deployed, in your team's hands

You pick the three workflows that hurt the most. Login and user management is included, and I do not count it as one of the three.

Small fleet → job assignment, driver status from phone, dispatcher view.

Professional services → client intake, document collection, task and deadline tracker.

Family-owned trading → inventory in and out, basic ledger, low stock alert.

HOW IT WORKS

1
Free 20-min call. You tell me what is breaking. I tell you if I can ship it in 30 days. If I cannot, I say so.

2
One-page written quote. Three modules listed, the stack, and the price. Plain language.

3
\$2,500 to start. I build for 28 days. Your team tests for 14 days after launch.

4
\$2,500 on delivery. Code, deployment, and access handed over to your team.

THE DUAL GUARANTEE

Delivery

If I do not ship in 30 days for reasons on my side, I keep building at no extra charge until it is live. Plus 25% off any follow-on work.

Fitness for purpose

After 14 days of live use, if it is not solving the problem we scoped, I refund 50% and you keep the code, the deployment, and everything I built.

Not a full refund. The work is real work and it is yours either way. This is a fairness guarantee, not an escape hatch.

WHY \$5,000 AND NOT \$500

A \$500 build is an Upwork developer who needs ten projects running at once to make rent. Yours becomes the one that slips. I run two builds at a time. Full attention. If I miss the date, the guarantee bites me, not you. I do not do real-time GPS, ELD integration, or anything that needs hardware install in month one. Those are real problems, not 30-day pilots. We can talk about them after the pilot ships and is working.
